

IVACS V-TRACE: Vehicle Trust, Route & Evidence Engine

Problem Statement OD-08: License Plate Detection and Recognition from Construction-Site CCTV Footage

Report Updated: 2026-09-18 13:16:34	Current State: Full MVP Completed & Verified	Runtime AI Policy: Strict Zero LLM / Native CV
Team: CodeAvengers	Evaluation Status: DEMO READY (42/42 Tests Pass)	Git Branch: main (Synced Remote)

1. System Component Status & Subsystem Architecture Audit

Component / Subsystem	Location / Path	Operational Description	Status
Video Ingestion Engine	backend/video/	MP4, RTSP, Webcam stream abstraction with configurable frame decimation	PASS
YouTube Live Stream Engine	backend/video/youtube_source.py	yt-dlp live stream extraction, public traffic cam ingestion & CV processing	PASS
Vehicle Detection Engine	backend/detection/vehicle_detector.py	Ultralytics YOLOv8n inference filtering cars, trucks, buses, motorcycles	PASS
Plate Localization Engine	backend/detection/plate_detector.py	Bumper ROI localization, morphological gradients, and vehicle bbox association	PASS
OCR Character Engine	backend/ocr/plate_ocr.py	EasyOCR recognition with IND blue strip removal and slot normalization	PASS
Vehicle Visual Fingerprint	backend/vehicle_identity/feature_extractor.py	ResNet18 backbone producing 512-dim L2-normalized deep visual embeddings	PASS
Identity Decision Engine	backend/vehicle_identity/identity_rules.py	Deterministic Rules A-E for plate-visual match, mismatch, and swap detection	PASS
Vehicle Registry Engine	backend/vehicle_registry/	Abstract interface, Demo SQLite registry, and VAHAN 4.0 government stub	PASS
Site Context & Route Engine	backend/site_context/	Site permits, 4 camera zones, and impossible/speed route anomaly detection	PASS
Security Alert Engine	backend/alerts/	Deterministic human-authored alerts, 10s deduplication, explainable trust snapshot	PASS
Command Center UI	frontend/	React 18 + Vite + Tailwind: 4-CCTV grid, YouTube stream player, evidence modal	PASS
Demo Scenario State Machine	backend/demo/scenario_manager.py	Controlled 4-scenario runner: Normal Repeat, Mismatch, Plate Swap, Unreadable	PASS
Database Persistence Layer	backend/database/	SQLite persistence (9 tables) for detections, registry, permits, routes, alerts	PASS
Evidence Storage Engine	data/evidence/	Multi-scale image vault (full frame, vehicle crop, plate crop, annotated ROI)	PASS
REST API Application	backend/app.py	FastAPI web service serving 34 REST endpoints and compiled React frontend	PASS
Automated QA Suite	tests/	42 comprehensive tests across foundation, identity, demo, MVP, and YouTube modules	PASS

2. Team Member Role Allocation (CodeAvengers Team)

Member	GitHub / Email	Subsystem Ownership & Core Deliverables
Jone Kavish (Team Lead)	jonekavish-dot jonekavish@gmail.com	Backend & Overall Management, OCR, React UI: Overall architecture, FastAPI service (29 endpoints), React Command Center UI, EasyOCR engine, ResNet18 visual embeddings, report generation, Git management.
K.V. Pranesh (Member 1)	kvpranesh kvpranesh49@gmail.com	Security Alert Engine & Temporal Deduplication: Alert schemas, 10s cooldown deduplication, explainable VehicleTrustSnapshot synthesis, YOLOv8 vehicle detection, automated QA test suite.
Gowshik Gunal (Member 2)	gowshikgunal22 gowshikgunal@gmail.com	Vehicle Registry & Plate Localization: Vehicle registry abstraction (`DemoVehicleRegistry` + `VahanVehicleRegistry` stub), registry attribute consistency check, bumper-ROI plate localization.

Dinesh Balu (Member 3)	dineshbalu7f-glitch dineshbalu7.f@gmail.com	Site Context, Route Integrity & Media: Construction site permits, camera zone topology, route integrity checker (impossible transitions & travel speed), offline scenario media generator.
----------------------------------	--	---

3. Vehicle Identity Rules, Registry Validation & Demo Scenarios

IVACS V-TRACE implements deterministic, calibrated comparison between the current vehicle's 512-dimensional ResNet18 feature embedding and historical records. In strict accordance with hackathon evaluation guidelines, the system employs an **Honest Detection Policy**: it never claims unverified ground truth (e.g., 'stolen' or 'cloned'), emitting qualified analytical signals instead: POSSIBLE PLATE–VEHICLE IDENTITY MISMATCH and MANUAL VERIFICATION REQUIRED.

Rule	Condition / Observation	Analytical Event Signal	Operational Meaning
Rule A	Same Plate + High Similarity (≥ 0.85)	SAME_VEHICLE	Confirmed consistent identity. Observation appended to history.
Rule B	Same Plate + Low Similarity (< 0.85)	POSSIBLE_IDENTITY_MISMATCH	Visual appearance deviates from registered record for this plate. Possible plate cloning.
Rule C	Different Plate + High Similarity (≥ 0.85)	POSSIBLE_PLATE_SWAP	High visual match with a previously seen vehicle bearing a different plate. Possible plate swap anomaly.
Rule D	Plate Unreadable + High Similarity (≥ 0.85)	PLATE_UNREADABLE_VEHICLE_MATCH	Plate obscured or blurry, but vehicle visual fingerprint matches existing identity. Tracking continuity preserved.
Rule E	No Historical Match Found	NEW_VEHICLE	First sighting of this vehicle. A new persistent identity record is registered in the database.

Controlled Hackathon Demo Scenarios:

Scenario ID	Step 1 (Baseline)	Step 2 (Trigger)	Expected Decision & Similarity
NORMAL_REPEAT	Tata Starbus (MH12DE1433)	Tata Starbus (MH12DE1433)	SAME_VEHICLE (sim ≥ 0.90 , REGISTRY_MATCH)
IDENTITY_MISMATCH	Tata Starbus (MH12DE1433)	Tipper Truck (MH12DE1433)	POSSIBLE_IDENTITY_MISMATCH (sim ≤ 0.35 , CRITICAL)
PLATE_SWAP	Tata Starbus (MH12DE1433)	Tata Starbus (KA01AB1234)	POSSIBLE_PLATE_SWAP (sim ≥ 0.88 , HIGH ALERT)
PLATE_UNREADABLE	Tata Starbus (MH12DE1433)	Tata Starbus (NO_PLATE/BLUR)	PLATE_UNREADABLE_VEHICLE_MATCH (sim ≥ 0.88)

4. REST API Endpoint Specifications (29 Endpoints)

Category	Method & Endpoint Route	Description & Operational Response
System	GET /api/health	Returns system health, active compute device (CPU/CUDA), initialized models.
Dashboard	GET /api/dashboard/summary	Aggregate fleet metrics: active alerts, critical mismatches, trust index.
Dashboard	GET /api/dashboard/live	Real-time live status for 4 camera cards: last plate, permit, route status.
Cameras	GET /api/cameras	Lists all configured CCTV feeds (CAM-01 through CAM-04).
Cameras	GET /api/cameras/{id}/stream	MJPEG streaming video feed for live monitoring grid.
Identity	GET /api/vehicles/{id}/comparison	Side-by-side evidence: current vehicle/plate vs historical reference.
Identity	GET /api/vehicles/{id}/trust-snapshot	Multi-factor vehicle trust calculation, visual match, permit & route checks.
Alerts	GET /api/alerts	Paginated security alert feed filtered by severity and camera.
Alerts	POST /api/alerts/{id}/dismiss	Operator alert acknowledgement and dismissal handler.
Registry	GET /api/registry/vehicle/{plate}	Vehicle registration query (RTO/VAHAN mock structure).
Permits	GET /api/permits	Active and historical construction site access permits.
Site	GET /api/site/zones & /routes	Camera spatial zone topology and allowed transition rules.
Scenarios	POST /api/demo/scenario/start	Starts one of 4 controlled scenarios (NORMAL_REPEAT, MISMATCH, etc.).
Scenarios	POST /api/demo/reset	Purges demo records (is_demo=1) while preserving all persistent data.
Media	GET /api/media	Universal local evidence image streaming endpoint.

5. Automated Quality Assurance & Test Verification (42/42 Passed - 100%)

Automated test suite executed via python -m pytest tests/ -v. Pass rate: **100% (42 passed, 0 failed)** in **29.49s**.

Module	Test Name	Verification Scope	Result
test_final_mvp.py	test_demo_registry_lookup	Verifies known vehicle query from DemoVehicleRegistry	PASS
test_final_mvp.py	test_unknown_registry_vehicle	Ensures unregistered plate lookup returns None gracefully	PASS
test_final_mvp.py	test_registry_attribute_match	Validates match between CCTV class and registry record	PASS
test_final_mvp.py	test_registry_attribute_mismatch	Detects conflict: detected truck vs registered bus	PASS
test_final_mvp.py	test_valid_permit	Verifies authorized zone entry with active permit	PASS
test_final_mvp.py	test_expired_permit	Flags access attempt with expired construction permit	PASS
test_final_mvp.py	test_unauthorized_zone	Flags vehicle entering restricted site zone	PASS
test_final_mvp.py	test_valid_route	Validates normal camera transition satisfying min time	PASS
test_final_mvp.py	test_impossible_route	Detects impossible camera jump and speed violation	PASS
test_final_mvp.py	test_dashboard_summary	Verifies KPI summary metrics and fleet trust index	PASS
test_final_mvp.py	test_alert_creation	Tests alert engine creation, severity, and DB storage	PASS
test_final_mvp.py	test_alert_deduplication	Asserts 10s cooldown suppresses duplicate alert bursts	PASS
test_final_mvp.py	test_trust_snapshot	Validates transparent multi-factor trust score synthesis	PASS
test_final_mvp.py	test_complete_identity_mismatch_flow	End-to-end integration: Mismatch scenario triggers Rule B & alert	PASS
test_final_mvp.py	test_complete_plate_swap_flow	End-to-end integration: Plate swap triggers Rule C & alert	PASS
test_demo_scenarios.py	test_scenario_normal_repeat	Verifies Rule A execution and SAME_VEHICLE event	PASS
test_demo_scenarios.py	test_scenario_identity_mismatch	Verifies Rule B mismatch: same plate + different appearance	PASS
test_demo_scenarios.py	test_scenario_plate_swap	Verifies Rule C plate swap: different plate + same appearance	PASS
test_demo_scenarios.py	test_scenario_unreadable_plate	Verifies Rule D unreadable plate tracking continuity	PASS
test_demo_scenarios.py	test_scenario_start_stop	Validates non-blocking scenario manager lifecycle	PASS
test_demo_scenarios.py	test_scenario_reset	Ensures POST /api/demo/reset purges demo records cleanly	PASS
test_demo_scenarios.py	test_comparison_api	Validates GET /api/vehicles/{id}/comparison evidence output	PASS
test_demo_scenarios.py	test_duplicate_identity_event_suppression	Asserts temporal cooldown deduplication on identity events	PASS
test_identity.py	test_cosine_similarity_basics	Verifies vector math, clamping [-1.0, 1.0], and orthogonal handling	PASS
test_identity.py	test_rule_new_vehicle	Validates Rule E: Registration of new vehicle on first sighting	PASS
test_identity.py	test_rule_same_vehicle	Validates Rule A: High similarity + same plate yields SAME_VEHICLE	PASS
test_identity.py	test_rule_possible_identity_mismatch	Validates Rule B: Same plate + low similarity yields MISMATCH	PASS
test_identity.py	test_rule_possible_plate_swap	Validates Rule C: Different plate + high similarity yields SWAP	PASS
test_identity.py	test_rule_plate_unreadable_vehicle_match	Validates Rule D: Unreadable plate tracking continuity	PASS
test_identity.py	test_service_identity_lifecycle	End-to-end service test: registers identity, observation, and DB	PASS
test_vtrace.py	test_video_source_initialization	Verifies MP4Source open, metadata retrieval, frame count, FPS	PASS
test_vtrace.py	test_invalid_video_handling	Tests robust failure handling for non-existent video files	PASS

test_vtrace.py	test_frame_processing_with_no_detection	Asserts blank frames produce None without throwing exceptions	PASS
test_vtrace.py	test_ocr_empty_result	Ensures unreadable plate crops handle gracefully with confidence 0.0	PASS
test_vtrace.py	test_valid_structured_detection_event	Validates Pydantic DetectionEvent schema and normalization	PASS
test_vtrace.py	test_database_insertion	Verifies SQLite record insertion and query retrieval of events	PASS
test_vtrace.py	test_evidence_image_creation	Confirms evidence images and crops are saved with correct paths	PASS
test_youtube_source.py	test_youtube_source_success	Verifies yt-dlp extraction and OpenCV live frame reading	PASS
test_youtube_source.py	test_youtube_source_extraction_failure	Asserts YOUTUBE_STREAM_UNAVAILABLE error on invalid stream	PASS
test_youtube_source.py	test_youtube_source_opencv_failure	Asserts YOUTUBE_STREAM_UNAVAILABLE error on decode failure	PASS
test_youtube_source.py	test_youtube_stream_manager_state	Validates background manager state machine and labeling	PASS
test_youtube_source.py	test_youtube_api_endpoints	Verifies all 5 YouTube live REST endpoints with TestClient	PASS

6. Git Traceability & Remote Commit Provenance

Remote Repository: https://github.com/jonekavish-dot/VISIONX_CODEAVENGERS_OD-08.git

All commits are authored team-member-wise and synchronized with the remote main branch.

Commit	Author	Date	Commit Message & Deliverable Scope
f86c88b	Jone Kavish jonekavish@gmail.com	2026-09-18	fix(runner): add port conflict detection, CLI args, and auto-port fallback to run_server.py
4ddb9a7	Jone Kavish jonekavish@gmail.com	2026-09-18	docs(report): sync progress report PDF with latest git commit provenance
3d8e105	Jone Kavish jonekavish@gmail.com	2026-09-18	feat(dashboard, core): integrate 29 REST endpoints, React Command Center UI, final architecture artifacts, and PDF report
77b61ca	K.V. Pranesh kvpranesh49@gmail.com	2026-09-18	feat(alerts, tests): implement deterministic alert engine, deduplication cooldown, trust snapshot, and 15-test QA suite
a6c3d8f	Gowshik Gunal gowshikgunal@gmail.com	2026-09-18	feat(registry): implement Vehicle Registry abstraction, VAHAN connector stub, and attribute consistency checks
c5e9660	Dinesh Balu dineshbalu7.f@gmail.com	2026-09-18	feat(site-context): implement construction site permits, camera zones, and route integrity engine
5952b47	Jone Kavish jonekavish@gmail.com	2026-09-18	feat(api, docs): deliver identity comparison endpoints, demo reset handler, report pdf, and system documentation
a16c6aa	K.V. Pranesh kvpranesh49@gmail.com	2026-09-18	feat(identity): add temporal cooldown deduplication and comparison schema definitions
997e488	Gowshik Gunal gowshikgunal@gmail.com	2026-09-18	feat(demo): implement 4-scenario deterministic demo state machine and evidence pipeline
6500f13	Dinesh Balu dineshbalu7.f@gmail.com	2026-09-18	feat(demo): build offline deterministic scenario media generator and 8-test validation suite
